

HEXAFIX® The new coupling system designed by Collomix – for all models

Screw connections between mixing tools and hand mixers often have one big disadvantage: The right instrument for changing the mixing tool is never to hand when it is needed.

The patented **HEXAFIX®** quick-action coupling system for changing your mixing tools without any instruments to help you, provides several advantages:

- The mixing tool is simple to take out for easy cleaning – this retains the quality and prolongs the service life of the tool.
- Without the mixing tool attached it is much easier to accommodate the machines in every kind of vehicle or holder.
- When mixing materials of different viscosities it is advisable to use different mixing tools.

Removing the tool is often a strain on the nerves. With **HEXAFIX®** you can take it easy.

Simplified system with hexagonal shaft: The mixing tool fits in both, hand mixers and power drills.

Adapter for retrofitting: Every mixer with M14 internal thread can be retrofitted with the practical **HEXAFIX®** adapter so that it immediately has all the advantages of this system.

The sturdy hexagonal shaft (wrench width 13) ensures a positive connection with the coupling. Thanks to the large contact surface on the shank it makes optimum use of the torque.

The supplement "HF" on machines and mixing tools denotes the **HEXAFIX®** system; the additional logo helps with identification on the packaging.

Easy cleaning of the mixing tool for greater effectiveness and longer service.

Available for everybody: The **HEXAFIX®** adapter fits on size M14 threads.
